Payoff

Earn on your tokenized stocks, from your own wallet.

The onchain layer for structured products.

- Live on X Layer testnet

Why now

Tokenized stocks grew 5x in a year. About 1 in 10 dollars is in DeFi.

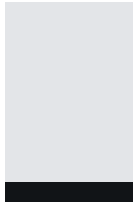

$3.2B

Tokenized stocks onchain

Held by 4.3 million addresses.

$338M

Active in DeFi protocols

Most tokens just sit in wallets.

Retail demand

Packaged as products, options already sell at scale.

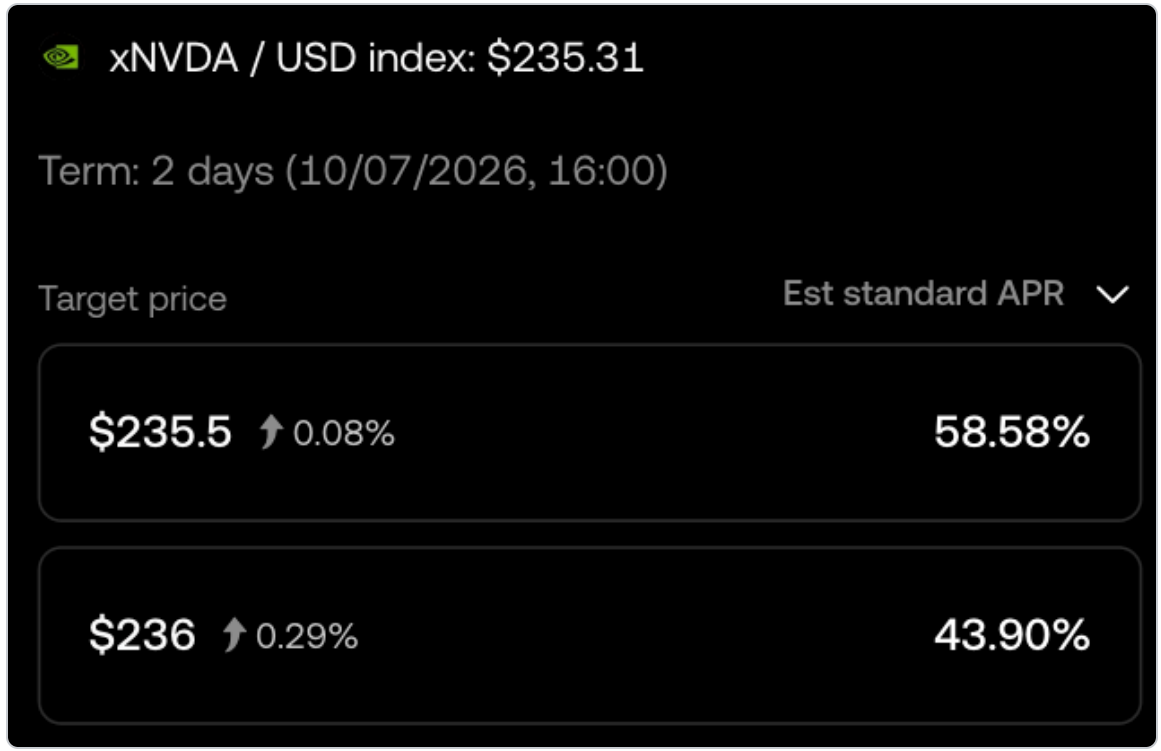

US structured products

$197B sold in 2025

Stock Dual Investment on exchanges

OKX	23 Jul 2026	11 stocks
Bybit	23 Jul 2026	10 stocks
Bitget	25 Jul 2026	21 stocks

It only works inside the exchange.

Sales: SRP, US full year 2025 · Launches as last announced: Odaily, Bybit, crypto.news, Jul to Aug 2026 · Screenshot: OKX Earn, xNVDA, 5 Oct 2026

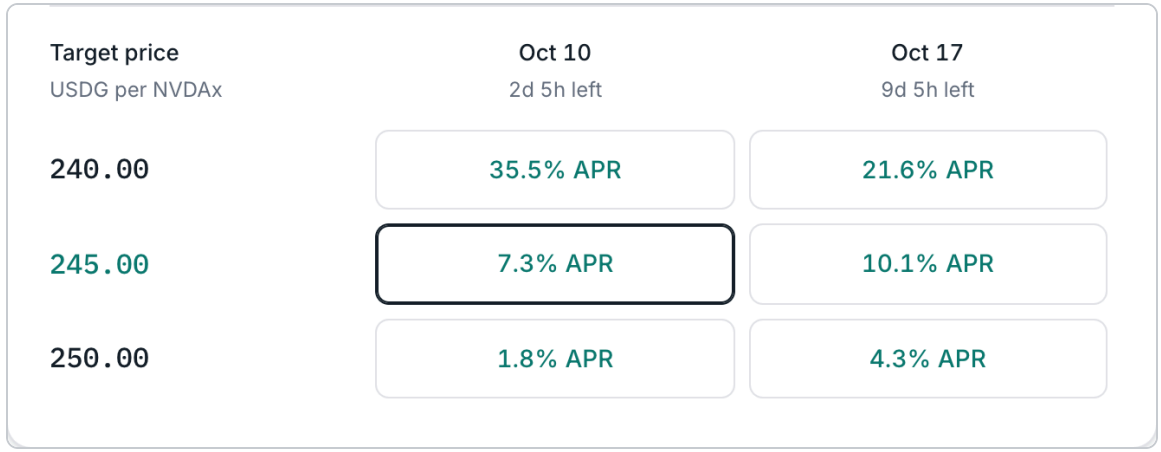

The product

Like a limit order that pays upfront, from the user's own wallet.

Sell High

1. Pick a price and a date.
2. The yield is paid upfront.
3. A contract locks the stock.

Buy Low does the same with USDG.

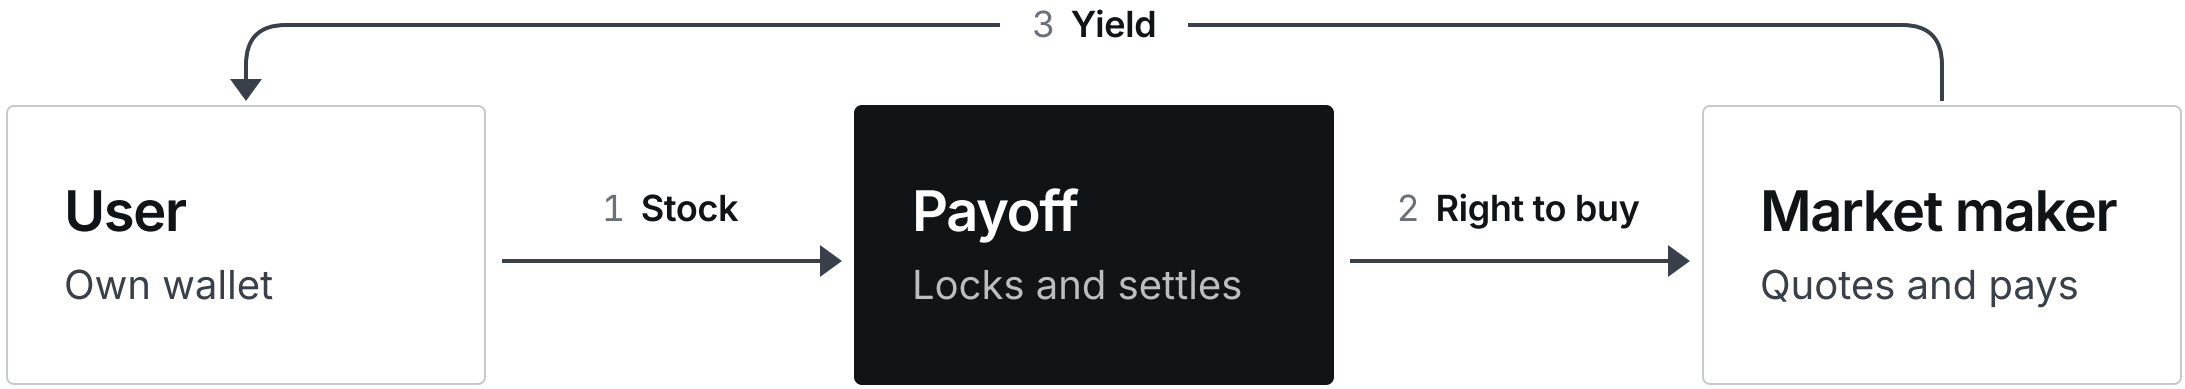

Screenshot: payoff.finance, Sell High for NVDAx on X Layer testnet, 7 Oct 2026 · Testnet reference quotes · Code: github.com/cl-fi/payoff-xlayer

How it works

The yield is an option premium.

Sell High is a covered call. **Buy Low** is a cash-secured put.

Sell High

Why onchain

4.3 million addresses hold the stock. Exchange products need it deposited first.

	Inside an exchange	Onchain
Who holds the stock	The exchange	**Non-custodial** A contract holds the stock, not a company.
Who sets the price	The exchange	**Open quoting** Any approved market maker can quote each order.
Who can offer it	Only the exchange	**Open distribution** Planned Any wallet or community can offer it, and earn a fee.

Today One app and one market maker, both ours.

The platform

Sold by many partners. Cleared in one place.

Assets Tokenized stocks · Other onchain assets

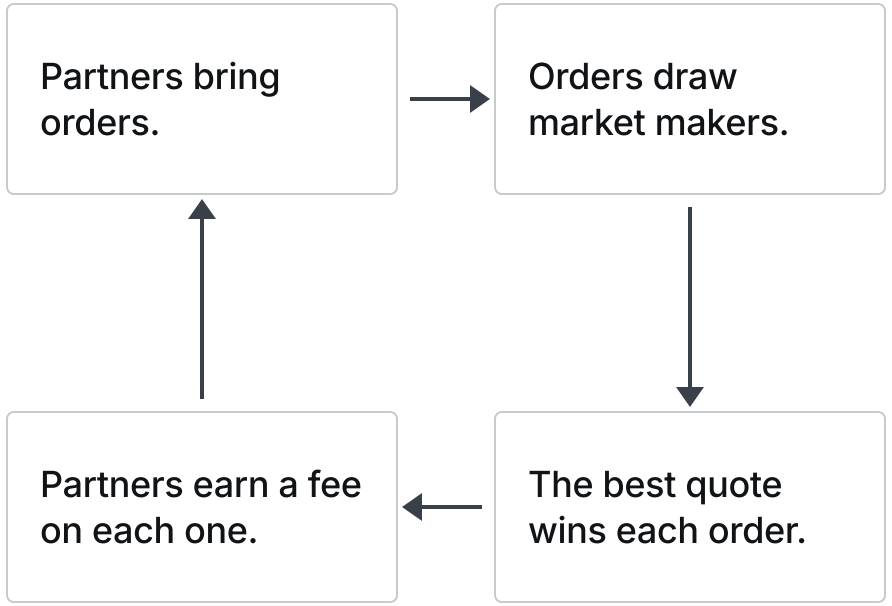

Today The demo on X Layer testnet runs one path through every layer.

- In the demo

Why it works

Orders are the hard part. Partners bring them.

Growth flywheel

Three choices

Sell to holders, not options traders.

Options traders already have a home. Derive handles about 84% of onchain options volume.

The market maker who takes the risk sets the price.

Formula-priced pools lost money when volatility jumped, per Lyra's 2021 stress tests.

Fees on real trades. No token at launch.

Ribbon's token rewards stopped growing TVL. Friktion's costs outpaced its revenue.

Sources: DefiLlama, 30-day options volume, 8 Oct 2026 · Lyra research, 17 Jul 2021 · Ribbon RGP-31, 27 Jan 2023 · CoinDesk on Friktion, 31 Jan 2023

Business model

Payoff takes a share of each premium.

How it earns

10% of each premium

The protocol fee on testnet. The user keeps the rest.

Partner fee Planned

A wallet or community that offers Payoff earns a fee.

$2.3M a year per $100M of TVL Estimate

Weekly premiums of 0.45%, with the 10% fee.

Next

1. Security audit
2. First outside wallet
3. Call and put spreads

Team

One founder today. One seat open.

Founder

Chenjie Lyu

Product lead and full-stack engineer. Built all of Payoff alone: contracts, quote gateway, market maker service and app.

Before Payoff, also prototyped onchain options and Dual Investment on Sui.

github.com/cl-fi

Startup experience

Founding member, Arttoo

2024–2026

RWA startup on Sui: fine-art tokenization and art-backed lending.

Led the tokenization platform from zero to launch, including its issuance design.

Turned it into an SDK for galleries, and won letters of intent from several of them.

Designed the lending protocol's capital structure, financial model and stress tests. This work supported Arttoo's seed round.

The ask

Looking for a co-founder and angels.

Two asks

A commercial co-founder

Makes Payoff known, brings wallets and investing communities on as partners, and shares fundraising.

Angels and advisors

Introductions to wallets, investing communities and aggregators.

Try it on X Layer testnet

1. Switch a wallet to X Layer testnet.
2. Get test OKB from the OKX faucet.
3. Get tNVDAx at payoff.finance/faucet.
4. Open Sell High. Pick a price and a date.
